

BIRD CHASER™

For birds and other pesky animals!

- Repels crows, pigeons, blackbirds, & sparrows
- Two types of audio deterrent
- Built-in Motion Sensor
- Adjustable Volume

Is your yard ominously looking like a Hitchcock movie? Birds such as sparrows, blackbirds, pigeons and crows bring problems and can disrupt the harmony of your property. The P7831 Birdchaser is a humane and easy way to keep these pests away.

The Birdchaser uses a built-in PIR sensor to trigger two types of audio repellents. The first is a recording of predatory bird sounds (hawks, falcons & owls) that is loud enough to frighten away invaders who come within range. The other setting is an ultrasonic sound that can help you chase away birds and is effective on other animals such as dogs, cats and squirrels. It is easy to install and adjust settings depending on your preference. It is ideal for farms, yards, orchards, gardens and public buildings where unwanted birds tend to flock.

Specifications:

Model:	P7831
Operation Voltage:	3xD size battery (4.5V not included)
Operation Current:	Standby = 1mA max. Sounding = 400mA max.
PIR Detection Distance:	26 feet max.
PIR Detection Angle:	110 degree
Ultra Sound Frequency:	20-40 KHz
Ultra Sound Duration:	20 second / each activate
Bird Chaser Sound Duration:	60 second / each activate
Dimensions:	4" x 5" x 10.5" (with mount)
Weight:	1 lb 2 oz (with mount)
